

## HONDA EM7000iS GENERATOR

Compact and easy to move with its wheels and folding handles, this is our most powerful generator. It provides 6500 watts of clean inverter power, and is one of the only small generators that can provide 240V output. It has 2x20 amp normal “wall plugs”, as well as a 3-prong 30 Amp twist lock connector. It has electric start and has information displays for wattage, engine speed and hours of operation. It runs at a maximum of 69dBA, but most of the time it will be even quieter since it automatically throttles down under less than full loads. When the power went out in Winnipeg, we used it to power an entire edit suite to ensure a client made their deadline. That’s performance!

6500 WATT GENERATOR \$195

## HONDA EU2000i

Small but potent, this little 4-stroke weighs 46 pounds dry. It’s an air-cooled pull-start that can run for hours on one gallon of gas. The “Eco-Throttle” sets its RPM automatically based on load. Very quiet, it can provide 1600 watts of power. Honda’s inverter technology provides clean power so you can run a computer if need be. It absorbs start up surges and can fire our 400 watt Joker HMI light with no problem.
